

Todo App

Welcome to our Simple Backend API Development assignment! In this task, you will build a basic RESTful API backend using Node.js, Express.js, JavaScript, and a lightweight database.

POST Create Task

[Open Request→](#)

```
http://localhost:3000/api/create
```

This request creates a new task using the provided data. The task is then added to the database.

Body raw (json)

json

```
{  
  "taskName": "task1"  
}
```

POST Update Task

[Open Request→](#)

```
http://localhost:3000/api/update
```

This request updates an existing task with new data. The task identified by its unique ID is modified with the provided information.

Body raw (json)

json

```
{  
  "id": "64ec501f5ee97b5f3273312b",  
  "taskName": "task updated"  
}
```

DELETE Delete Task

[Open Request →](#)

`http://localhost:3000/api/delete`

This request deletes a task based on its unique ID. The task is permanently removed from the database.

Body raw (json)

json

```
{  
  "id": "64ec501f5ee97b5f327331b"  
}
```

GET All Tasks

[Open Request →](#)

`http://localhost:3000/api/tasks`

This request retrieves a list of all tasks stored in the database.
